SUMMARY

A Cybersecurity Enthusiast and IT Risk Analyst currently pursuing Informatics Engineering at UIN Syarif Hidayatullah Jakarta. Combining a strong foundation in software architecture with deep technical expertise in vulnerability assessment, OSINT threat intelligence, and cryptography. Part of the Syarif Hidayatullah Security Club (SHSC) and a national CTF finalist. Dedicated to translating technical security findings into actionable IT governance and risk mitigation strategies to protect enterprise infrastructures.

WORK EXPERIENCE

UIN Syarif Hidayatullah Jakarta — **Ciputat, Tangerang**

Frontend Engineer Lead & Penetration Tester — *Nov 2025 - Jun 2026*

- Led development of the faculty's OBE system, collaborating with backend teams on authentication, authorization, and role-based access control.
- Conducted security testing and identified **Cross-Site Scripting (XSS)**, **Broken Access Control (BAC)**, and various vulnerabilities in a faculty's web applications.
- Assessed access control and user privileges to identify unauthorized access and privilege escalation scenarios.
- Maintained and secured the Laravel/Livewire-based Layanan FST application serving **800+ students and faculty members**.

ACHIEVEMENTS & AWARDS

- **13th | Cyber Breaker Competition (CBC) Season 3**
  Achieved 13th place in the Cyber Breaker Competition (CBC) Season 3. Effectively solved advanced cybersecurity challenges by utilizing practical skills in Web Exploitation and Reverse Engineering.
- **Finalist | Country to Country CTF Competition 2026**
  Achieved Finalist status among 100+ international teams in a highly competitive global cybersecurity competition and solved advanced technical challenges in memory forensics, web, and boot2root under strict time constraints.

TOP 3 PROJECTS

NusaShield

Osint Financial Threat Hunter | project link

- OSINT threat-intelligence platform designed to detect potential financial data leaks across public forums, social media, and paste sites.
- Built automated data collection, normalization, and relevance classification pipelines to prioritize potential threats.

LedgerLens

blockchain forensics | repo link

- A recursive token tracking application providing end-to-end visibility across wallets, DEXs, and crypto mixers.
- Engineered the core recursive tracking algorithm and backend services using Python to parse multi-hop transaction data efficiently.

Sefirah Node

Interactive Threat Intelligence Honeypot

- An interactive honeypot system designed to capture, analyze, and visualize cyber-attack data in real-time.
- Engineered a secure honeypot infrastructure to actively lure, intercept, and log unauthorized access attempts, botnet activities, and malicious payloads.

EDUCATION

UIN Syarif Hidayatullah Jakarta
Bachelor of Computer Science
Graduation Date: Jun 2027

Current GPA: 3.67

TECHNICAL SKILLS

Programming: JavaScript, Python, Next.js, Express.js, Laravel
Security: reverse engineering, digital forensic, web penetration testing
Tools: Git, Postman, Docker, Splunk
