SUMMARY

Cybersecurity-focused Software Developer with hands-on experience in web penetration testing, vulnerability assessment, OSINT threat intelligence, and security research. Experienced in identifying web application vulnerabilities including XSS and Broken Access Control, as well as analyzing attack techniques through CTF competitions and security projects. Strong software engineering foundation with a focus on developing and securing web applications.

WORK EXPERIENCE

UIN Syarif Hidayatullah Jakarta

Frontend Engineer Lead & Penetration Tester

Ciputat, Tangerang

Nov 2025 - Jun 2026

- Conducted security testing of faculty web applications, identifying **XSS, Broken Access Control, and privilege escalation vulnerabilities**.
- Assessed access controls and user privileges to identify unauthorized access and privilege escalation scenarios.
- Maintained and secured a Laravel/Livewire-based application serving **800+ students and faculty members**.
- Led development of the faculty's OBE system, collaborating with backend teams on authentication, authorization, and RBAC.

ACHIEVEMENTS & AWARDS

- **13th | Cyber Breaker Competition (CBC) Season 3**
Achieved 13th place in the Cyber Breaker Competition (CBC) Season 3. Effectively solved advanced cybersecurity challenges by utilizing practical skills in Web Exploitation and Reverse Engineering.
- **Finalist | Country to Country CTF Competition 2026**
Finalist among 100+ international teams, solving challenges across **memory forensics, web exploitation, and boot2root** under strict time constraints.

SELECTED PROJECTS

NusaShield

OSINT Financial Threat Hunter | [project link](#)

- OSINT threat-intelligence platform designed to detect potential financial data leaks across public forums, social media, and paste sites.
- Built automated data collection pipelines processing **5 sources**, with normalization and relevance classification to prioritize potential threats.

LedgerLens

blockchain forensics | [repo link](#)

- A recursive token tracking application providing end-to-end visibility across wallets, DEXs, and crypto mixers.
- Engineered the core recursive tracking algorithm and backend services using Python to parse multi-hop transaction data efficiently.

Sefirah Node

Interactive Threat Intelligence Honeypot

- An interactive honeypot system designed to capture, analyze, and visualize cyber-attack data in real-time.
- Engineered a secure honeypot infrastructure to actively lure, intercept, and log unauthorized access attempts, botnet activities, and malicious payloads.

EDUCATION

UIN Syarif Hidayatullah Jakarta

Bachelor of Computer Science

Graduation Date: Jun 2027

Current GPA: 3.67

TECHNICAL SKILLS

Programming: JavaScript, Python, Next.js, Express.js, Laravel

Security: reverse engineering, digital forensic, web penetration testing

Tools: Git, Postman, Docker, Splunk
