SUMMARY

A Software Developer and Security Enthusiast currently pursuing Informatics Engineering at UIN Syarif Hidayatullah Jakarta. Specializes in crafting secure, high-performance web interfaces, with proven experience leading frontend architectures for academic systems and competing as a finalist in national and global CTF events.

WORK EXPERIENCE

UIN Syarif Hidayatullah Jakarta

Ciputat, Tangerang

Frontend Engineer Lead

Nov 2025 - Jun 2026

- Led the frontend architecture and development of the faculty's Outcome-Based Education (OBE) system, collaborating directly with backend teams to implement role-based dashboards, curriculum tracking modules, and complex grading matrix configurations.
- Engineered scalable frontend infrastructures utilizing Next.js and React, designing reusable component hierarchies, complex routing mechanisms, and centralized state management stores with Zustand to ensure highly secure authentication flows.
- Maintained and optimized the existing Layanan FST web application (built with Laravel/Livewire), resolving technical issues to improve system reliability and streamline administrative workflows for **over 800** active students and faculty members.

ACHIEVEMENTS & AWARDS

13th | Cyber Breaker Competition (CBC) Season 3

Achieved 13th place in the Cyber Breaker Competition (CBC) Season 3. Effectively solved advanced cybersecurity challenges by utilizing practical skills in Web Exploitation and Reverse Engineering.

Finalist | Waskita Manunggal Siber 2026

Advanced to the final stage of the Waskita Manunggal Siber CTF organized by Pussiber AD. Collaborated with team members to strategize and execute complex technical solutions against top-tier competitors.

TOP 3 PROJECTS

NusaShield

Osint Financial Threat Hunter

- Lead designer and developer of an OSINT threat-intelligence platform for Indonesia's financial ecosystem, focused on early detection of financial data leaks in public channels.
- Built automated data-collection pipelines from public sources (forums; social media; paste sites) with normalization and relevance classification.
- Delivered measurable impact by improving early leak visibility and accelerating analyst response through automation and prioritized alerts.

Academic Monitoring System

Full-Stack Web Application

- Developed a web-based academic monitoring platform designed to help parents monitor students' academic progress.
- Implemented frontend interfaces and application logic for presenting academic information in a structured and accessible format.
- Worked with authentication, API integration, and database-driven application workflows.

Reaksi

React like framework

- Developed a React-like framework with a custom state hook for managing component state.
- Designed the initial framework foundation with extensibility in mind for future lifecycle-related functionality.
- Created initial documentation to help users understand and adopt the library.

EDUCATION

UIN Syarif Hidayatullah Jakarta

Tangerang Selatan

Bachelor of Computer Science

Graduation Date: Jun 2027

Current GPA: 3.67

TECHNICAL SKILLS

Programming & Web Development : JavaScript, Python, HTML, Next.js, React, Node.js, Express.js, Laravel

Database: MySQL, MongoDB, SQLite

Cybersecurity: Web Exploitation, Reverse Engineering, Malware Analysis, Digital Forensics, OSINT

Development Tools : Git, Postman, Docker
