## SUMMARY

A Software Developer and Security Enthusiast currently pursuing Informatics Engineering at UIN Syarif Hidayatullah Jakarta. Specializes in crafting secure, high-performance web interfaces, with proven experience leading frontend architectures for academic systems and competing as a finalist in national and global CTF events.

## WORK EXPERIENCE

### UIN Syarif Hidayatullah Jakarta

Ciputat, Tangerang

Frontend Engineer Lead (KKN Program)

Nov 2025 - Present

- Directed the frontend development of the faculty's Outcome-Based Education (OBE) system, managing project sprints, complex routing architectures, and centralized state management.
- Maintained and optimized existing faculty service applications, resolving technical issues to ensure system reliability and a seamless operational experience for academic staff and students.
- Engineered secure authentication stores and structured component hierarchies to ensure the application is scalable and easy to maintain.

Fullstack Developer (Assignment Project)

Aug 2024 - Nov 2024

- Developed and optimized the Academic Monitoring System website, make accessibility and performance metrics by 30% through implementing responsive design principles and conducting usability testing.
- Launched an innovative tracking solution that enabled instant monitoring of student activities for parents; findings highlighted key areas needing improvement, enhancing the overall academic performance of monitored students by 30%.
- Coordinated with other students to deploy an interactive group work monitoring tool, fostering collaboration that led to the successful completion of 3 cross-disciplinary projects within the academic term.

## ACHIVEMENTS & AWARDS

### 13th | Cyber Breaker Competition (CBC) Season 3

Achieved 13th place in the Cyber Breaker Competition (CBC) Season 3. Effectively solved advanced cybersecurity challenges by utilizing practical skills in Web Exploitation and Reverse Engineering.

### Finalist | Waskita Manunggal Siber 2026

Advanced to the final stage of the Waskita Manunggal Siber CTF organized by Pussiber AD. Collaborated with team members to strategize and execute complex technical solutions against top-tier competitors.

### Global Rank 19th | Null CTF 2025

Solved advanced cybersecurity challenges encompassing DFIR, OSINT, and Web.

## TECHNICAL PROJECTS

### Personal Projects

Twitter Clone

- Developed a fully functional clone of the Twitter website using NextJS 14 and Socket IO.
- Included features like live feed updates, user authentication, and responsive design.

Reaksi - React-like framework

- Developed the state hook for managing state within components.
- Established a foundation for future enhancements, such as lifecycle methods.
- Provided initial documentation to assist users in understanding and adopting the library.

Notion Clone

Designed a Notion-like application with a modular block-based editor. Developed an interactive drag-and-drop block editor using Next.js 14 and TypeScript. Optimized performance for rendering large documents with efficient state management.

Integrated MongoDB for structured data storage and retrieval. Enhanced user experience with auto-save functionality and responsive UI.
